Bootstrap for Regression

05/12/2020

Introduction

- Bootstrapping is a computer-intensive procedure.
- Allows us to estimate the sampling distribution of a statistic.

In class discussion

1. Original dataset

```
library(readr)
bloodpressure <- read_csv("bloodpressure.csv")
bloodpressure
```

```
# A tibble: 20 x 9
    ...1    Pt    BP   Age Weight   BSA   Dur Pulse Stress
   <dbl> <dbl> <dbl> <dbl>  <dbl> <dbl> <dbl> <dbl>  <dbl>
 1     1     1   105    47   85.4  1.75   5.1    63     33
 2     2     2   115    49   94.2  2.1    3.8    70     14
